— value → string

Record
- creator
- revision history/provenance
- part of dataset
- rights statement
- dates related to provenance
- processed by (→ Organization)
- acknowledgements (HMML; → Agent)

Record —describes→ Manuscript Object
Manuscript Object —identified_by→ Identifier
Manuscript Object —has_form→ Form
Manuscript Object —has_current_state→
Manuscript Object —note→ string (Need types?)
Manuscript Object —part_of→ Collection
Manuscript Object —has_part→ Codicological Unit
Manuscript Object —has_content_item→ Content Item
Manuscript Object —has_surrogate→ Surrogate
Manuscript Object —describes→

Content Item
Content Item —subclassOf← Addition
Codicological Unit —has_content_item→ Addition

Collection —held_by→ Organization
Collection —held_in→ Repository

Organization
Access restrictions??

Repository —located_in→ Place
Place —located_in→ Place

Surrogate
- capture date
- format
- altSurrogates? (= just more Surrogates)
- reproduction notes
- access restrictions
- viewable online
- access note? (or withRepository/Org?)
- contact info for the org about access?

HMML bits:
- genre
- subject
- features

Extent diagram with the following labels and relationships:

- string
- integer
- Extent Type
- Note (and/or label?)
- type
- count
- Extent
- Unit?
- Extent (add to ms obj)

Decoration
Condition (string)
Binding note (ms obj)
Provenance events (ms obj, but could be cod un)

Creator Attribution

has_attested_name

xsd:string

- attributed_to_as_creator
  - as_author
  - as_editor
  - as_translator
Etc. are sub-properties of as_creator

related_item can be:
- parent-child
- next-sib
- previous-sib

Class

Data

Individual

Individuals will be labeled
by the class to which they
belong, but will function like
an enumerated value set.
E.g., the individual "Codex"
is a member of the class
"Form".
